KNF-7 | 5 Firecraft Hacks for the Fallout

Stay Sealed, Stay Clever

Tinder Cache:

Grab dry grass, bark, cattail fluff, or dryer lint. Smear cotton balls with grease—store in a waterproof tin with desiccant. Your spark's lifeline.

Spark Savy:

Ferro rod or busted battery with steel wool. Cracked magnifier works if you've got patience. Ignite fast, feed slow.

Teepee Lay:

Stack tinder in a teepee shape—good airflow, quick start. Feed honest, no flash. Keeps you warm all night.

Fire Burrito:

Wrap tight stick bundle in bark. Burns low and slow—perfect for long hauls.

Signal Smoke:

Toss green veg on the flame—thick smoke calls help. Use stealth if eyes are near.

KNF-7 | Quit pokin' it—let it catch.

KNF-7 | FIRE PROTOCOL

Stay Sealed, Stay Clever

Build Tinder Box:

Pack dry grass, char cloth, or corn chips in a sealed tin. Keep it dry—your first spark depends on it.

Strike Smart:

Use flint, ferro rod, or battery/wool. Coat cotton balls in jelly for a slow burn.

Lay It Right:

Teepee for speed, log cabin for control, lean-to for wind. Start small, feed steady.

Safety First:

Clear space, ring with stones, dig a pit. Smother with soil—check heat before leaving.

Long Burn Hack:

Wrap stick bundle in bark—fire burrito lasts through the dark.

FKNF-7 | Fire tells the wasteland you're alive.

KNF-7 | FALLOUT FIRE RULES

Stay Sealed, Stay Clever

DO:

**Stack tinder dry—grass or lint ignites true.
Build teepee for fast flame—airflow wins.
Smother with sand—water's a luxury.
Use reflectors—heat where you need it.
Signal with smoke—green veg draws eyes.**

DON'T:

**Waste sparks on show—fuel's finite.
Skip the pit—wildfire kills.
Poke the fire—let it breathe.
Ignore wind—lean-to or bust.
Leave it hot—check with your hand.**

KNF7Workshop003

KNF-7 FIELD NOTE // DREG 'POPS' MADDOX
TOPIC: CHARCOAL, HOMEMADE.

Don't pay good ammo for charcoal when you can make it yourself.

All you need's dry wood, a fire pit, and a lid that blocks air. Hardwood's best-oak, maple, hickory if you're lucky. No paint, no poison. Just wood.

Build a small fire and let it catch. Once it's burnin' steady, choke it. Cover the top with a metal lid, dirt, or old sheet metal-anything that cuts off oxygen. You want heat without flame. that's how you get charcoal, not ash. Let it smolder low and slow -couple hours, maybe more, dependin' on your pile. Once it cools, break it up. That's your black gold. Good for filterin' water, feedin' soil, or smudgin' your face before a night run.

Don't forget:

NO AIR CHARCOAL. TOO MUCH AIR =
NOTHIN' BUT DUST AND REGRET.

Stay smart. Stay scorched.

-Pops Maddox

KNF-7 | Fire LOG

Date

A circular red stamp is centered on a light-colored, textured background. The stamp features a stylized microphone in the center, with a dotted pattern on its grille. Around the microphone, the words "BUNKER BROADCAST SERVICE" are written in a bold, sans-serif font, with "BUNKER BROADCAST" on the bottom half and "SERVICE" on the top half. Above the microphone, the number "44" is positioned above the letter "ST". The entire stamp is rendered in a faded, reddish-brown color, giving it an aged appearance. The background behind the stamp is a light beige or cream color with a subtle, irregular texture.
